November 7, 2007

Laramie, WY – The Blue Sky Group Inc. (Blue Sky) announced today that its new subsidiary, Gas Sensing Technology Corp. (GST), has purchased the methane sensing technology and other assets of WellDog Inc. GST is in the process of hiring former employees and will continue to provide commercial services to the coalbed methane industry.

Blue Sky founded WellDog, which developed its unique methane sensing technology from 1999 to 2005. WellDog raised capital from investors to fund the technology development and its initial commercial growth. The resultant technical services have helped dozens of companies find natural gas in coal faster and develop it more profitably while reducing associated water production.

GST will be headquartered in Laramie, WY and will be led by a group of former WellDog employees and supported by Blue Sky.

More information regarding Blue Sky is available on the web at www.theblueskygroup.com.
